

SPACE 2021: A LONG-AWAITED EDITION!

SPACE will be the major event of this agricultural start-up in 2021. All the professionals concerned by this food chain will thus be able to meet and discuss after this long period without physical meetings.

SPACE is a professional agricultural exhibition for all livestock industry stakeholders: bovine (dairy and beef), poultry, rabbits, sheep, goat and fish farming sector. The show highlights a complete offer in animal feed and nutrition, farm buildings, genetics, animal health, milking energy, livestock effluent treatment and organic production.

Innov'Space rewards the latest innovations in the animal production. A high-level quality of competitions and presentations in animal genetics. Espace for the

future, a unique and pioneering exhibition zone. VIP reception for international visitors and B-to-B meetings.

The expectation for SPACE 2021 is really strong as evidenced by the high level of exhibitor registration and the impatience shown by its usual participants to finally meet at the Show. In this constantly evolving context, with increasingly strong expressions of societal expectations, breeders indeed need to meet at SPACE to exchange, inform and discuss the future of their professions.

The progress of vaccination and the evolution of the health context now make it possible to predict the occurrence of events in September. However, it will still be essential at this date to set up a health system. Participants in the

Show must therefore have their health pass.

A 3-day Fair at the Parc-Expo and a digital day

Always attentive to their participants, the SPACE organizers have decided to meet this expectation on the part of exhibitors by inaugurating this new formula. The Salon will close its doors later on Thursday (8 p.m. instead of 6 p.m. on Tuesday and Wednesday).

See you all at SPACE 2021, from September 14 to 16 at Parc-Expo in Rennes, France, for the 35th edition of the Show, and on Friday September 17 behind the screens for a digital day!
