

# BOUZA'TECH

## YOUR ANIMAL ANALYSIS IN THE BAG!

A tool that analyses the health of each individual cow and the assimilation of their rations, based on photos of cowpat.

Based on photographs of cowpat and machine learning, the **Bouza'Tech application** can be used to determine the state of the herd's health in order to optimise the cows' rations.

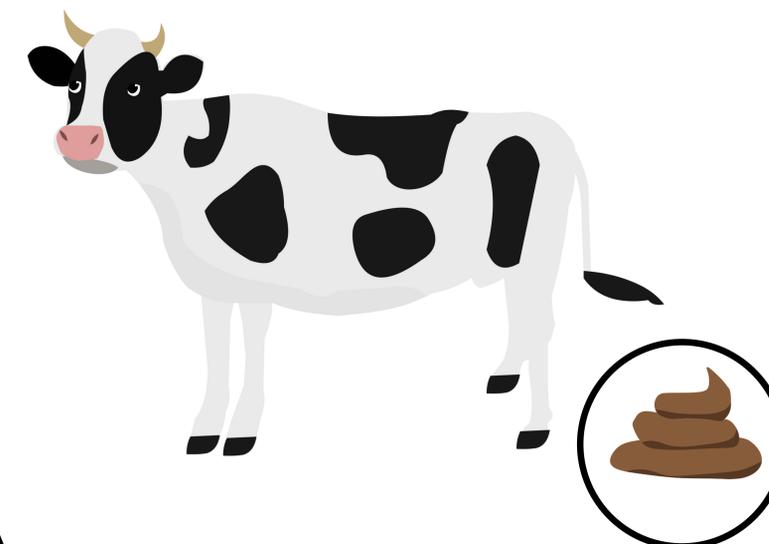

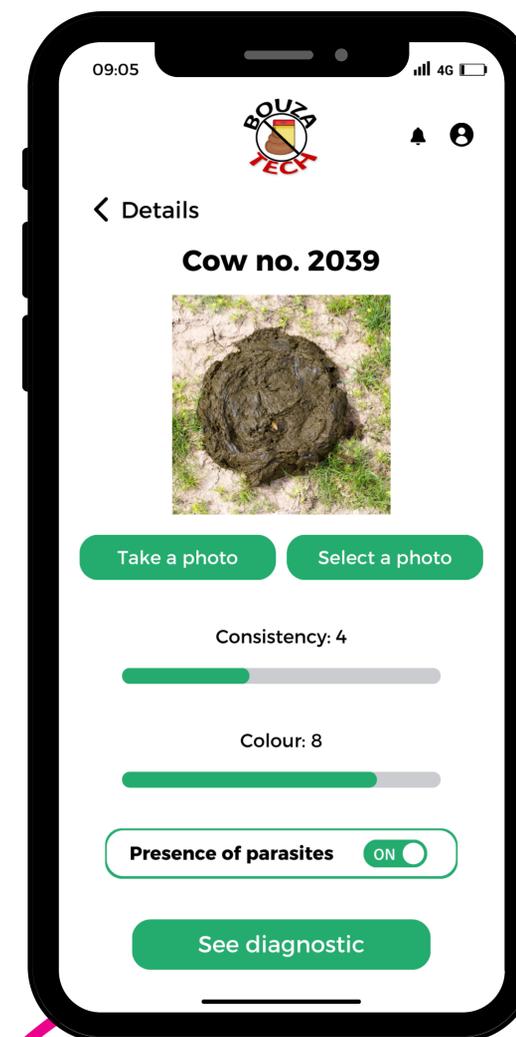

This app will allow its users to:

- ✓ Track all the individuals in the herd
- ✓ Keep a record of each individual's diagnoses
- ✓ Obtain a quick and simple diagnosis using a photo and additional fields

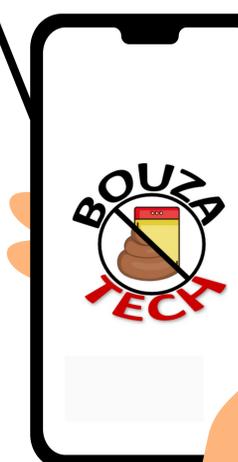

**With the aim of better preventing disease and therefore improving the health of the herd!**

*Project carried out by:*

- Jade JEGAT – Lycée Kerlebost
- Youenn GUILLO – Lycée Kerlebost
- Gwendal LE PAGE – ISEN
- Yoann LE MORVAN – ISEN
